

Computer Cab plc Environmental Policy Statement

Computer Cab provides taxi transport booking and account management services to corporate and public sector clients and individuals covering over 10,000 journeys per day carried out by drivers and service partners.

The business has a direct impact on the environment through the consumption of energy and other resources used in our daily business activities and an indirect impact through the activities of our drivers and service partners.

Our objective is to minimise our impact wherever possible, and to lead the industry on environmental management by raising awareness with employees and other stakeholders, proactive communication with customers and collaboration with drivers and service partners to help them improve their environmental performance.

Computer Cab policy is to:

- Implement a programme of continuous improvement to minimise the company's impacts on the environment;
- Monitor progress through a system for setting and reviewing specific environmental objectives and targets;
- Ensure we are compliant with all UK environmental legislation;
- Evaluate and manage environmental impacts when developing policies, products or change initiatives;
- Minimise waste by reducing consumption of paper and other resources, developing effective waste management and recycling procedures;
- Introduce measures to reduce energy consumption and the company carbon footprint;
- Increase awareness of environmental responsibilities among the company's staff, drivers and service partners through training and regular communication of environmental matters;
- Support the promotion of environmental initiatives by our employees and relevant external organisations;
- Seek to ensure that products and services used by the company do not use materials unnecessarily harmful to the environment, such as wood from unsustainable forests, or chemicals containing ozone depleting gases.

To ensure successful delivery of the environmental policy, Computer Cab have implemented an environmental management system certified to the international environmental management standard ISO 14001:2004. The management system is monitored and reviewed regularly by the Management Committee and audited by external accredited auditors. All staff are encouraged to participate and to take personal responsibility for working in an environmentally friendly manner.
